

ITEM #1

MXL 990S STUDIO CONDENSER MIC

With all the affordable options out there today, this has more features than any other mic in its class. It's simply unbeatable for the money. Not only do I use the 990s for the Home Music Studio 1 podcast, I record virtually all my studio vocals with it as well.

[Click here to find out more about this mic.](#)

ITEM #2

NADY METAL POP FILTER

I've never recorded a vocal track without using a pop filter. The Nady metal pop filter works great for an unbelievable price (it looks much better than a wire hanger and pantyhose too). Don't get caught without one in your own home studio.

[Click here to check it out for yourself.](#)

ITEM #3

SENNHEISER HD-280 PRO HEADPHONES

The quality of these headphones is simply amazing, given that they don't even cost \$100. I use them in every mix to check my panning and frequency. They are comfortable to wear for hours at a time and sound great!

[Find out more by clicking here.](#)

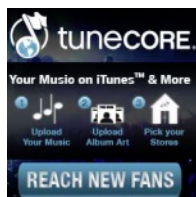

ITEM #4

SCARLETT 2I2 USB AUDIO INTERFACE

Made by Focusrite, this is one of the most affordable, high quality, audio interfaces out there. The mic pre amps are extremely quiet when it comes to background noise. It also records at a full 24/96k quality. I've mixed tons of projects using my 2i2 and still consider it my favorite audio interface without a doubt. [Learn more about the 2i2 by clicking here.](#)

ITEM #5

SELL YOUR OWN PROJECT ON ITUNES

Start reaping the reward of all your mixing efforts. Sell your own projects on iTunes using TuneCore. They do the leg work, you keep the profits and for a ridiculously low price at that. It was an awesome feeling when I saw my first album for sale in the iTunes music store.

[Sell your entire album on iTunes now for only \\$30.](#)
